Online Course Details: the course “Python for Everybody”.

The screenshot shows a web browser window with several tabs. The active tab is titled "PY4E - Python for Everybody". The address bar shows the URL "py4e.com/tools/pythonauto/?PHPSESSID=b8c11b76329f5ad39a78125ebcdfa99d". The page has a blue header with the word "Done".

The main content area is divided into two sections. The left section contains a problem statement and a code editor. The problem statement is: "3.1 Write a program to prompt the user for hours and rate per hour using input to compute gross pay. Pay the hourly rate for the hours up to 40 and 1.5 times the hourly rate for all hours worked above 40 hours. Use 45 hours and a rate of 10.50 per hour to test the program (the pay should be 498.75). You should use **input** to read a string and **float()** to convert the string to a number. Do not worry about error checking the user input - assume the user types numbers properly."

The code editor shows the following Python code:

```
1 hrs = input("Enter Hours:")
2 h = float(hrs)
3 xx = input("Enter the Rate:")
4 x = float(xx)
5 if h <= 40:
6     print(h * x)
7 elif h > 40:
8     print(40 * x + (h-40)*1.5*x)
```

Below the code editor are three buttons: "Check Code", "Reset Code", and "Grade updated on server."

The right section is titled "Your Output" and shows the output "498.75". Below it is a section titled "Desired Output" which also shows "498.75".

The bottom of the screenshot shows a Windows taskbar with the search bar, task view, and various application icons. The system clock shows the time as 09:59 on 11-08-2020.
